Our commercial Atlas LULA limited Use/Limited application elevator stands out in terms of quality and design and is the perfect solution for public access in a limited traffic situation. The LULA is used for numerous applications such as schools, churches, low-rise buildings.

We believe in providing commercial and residential elevators that exceed all industry standards in safety, performance, and reliability. The Atlas LULA is thoroughly engineered using the latest 3D engineering software and tested in a factory test tower before being certified by a well-known independent testing laboratory.

LULA elevators are designed to service schools, churches, low-rise buildings, low-occupancy commercial buildings. They provide the functionality of commercial elevators with the practicality and price point suitable for these applications. It can be designed to fit into any décor and be as elaborate or simplistic as desired

HOISTWAY LAYOUT

Whether you are building a home, designing a public or commercial place, or adding an elevator to an existing home, planning and installing an elevator can be overwhelming, particularly for builders new to the process.

Atlas experienced team provide expert consultation to help you navigate the entire process from start to finish – from specification to framing, installation to inspection. Our goal is to make your elevator installation process as simple as possible. This includes manufacturing a cab that fits your specific hoistway measurements.

General technical information for a LULA sameside entry and exit a popular hoistway diagrammed to the left. This drawing is strictly for informational purposes only.

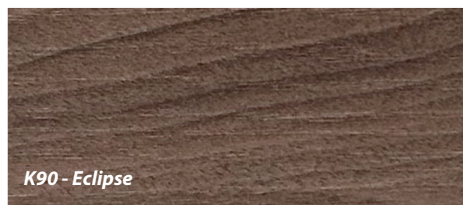

For more information in standard and custom hoistways please speak with your sale representative or visit www.atlasacces.com/contact-us

DESIGN YOUR LULA ELEVATOR

Cab finishes

Wood veneer offers a sleek wood option or a base for a cabinet finisher to add moldings to match any home decor. *(Finish shown: Gilbralter)*
